A learning management system (LMS) is the virtual learning environment that can administer both time-bound courses as well as self-paced learning options such as competency-based education (CBE). Here are a few of the ways that an LMS responds to the top institutional needs and requirements to ensure a smooth and effective program.

1. **Defining competencies.** An LMS communicates defined competencies through learning modules.

2. **Flexible pacing.** An LMS releases a new module or competency based on completion of or performance on the previous one allowing paths can adapt based on student achievement.

3. **Continuous intake.** An LMS tracks “days since enrollment” for groups and individual as content can appear based on time elapsed since enrollment.

4. **Ease of use.** Students can easily monitor progress and communicate with instructors using colorful, visual dashboards.

5. **Instructor presence.** Instructors can post announcements and send automated messages to recognize achievements and provide guidance when students are at-risk.

6. **Progression by mastery.** An LMS releases content based on competency completion or based on a student’s performance on an assessment.

7. **Demonstration of competence.** An LMS documents and tracks learner progress and supports multiple methods of assessment (quizzing, grades, videos, media submissions, etc.).

8. **Substantive interaction.** Substantive interaction between faculty SMEs and students can be facilitated in a wide variety of ways including 1:1 discussion forums, e-mails, announcements, and other messages.

9. **Feedback and encouragement.** An LMS includes private discussions and automated communications for personalized feedback and prompt that appear upon completion of a task.

10. **Structure and support.** Checklists can be conditionally released based on a learner’s progress so that the next set of tasks appear as the learner completes the previous.

11. **Remediation.** Unmet thresholds on competencies or assessment performance can trigger an email that’s sent to learners with targeted support tips, resources, and common challenges that learners experience.

12. **Prior Learning Assessment (PLA).** Portfolio functionality can capture, organize, and present prior knowledge in relation to competencies. Pre-assessment within courses provide feedback to learners about their knowledge gaps or trigger the release of content.

13. **Data and reporting.** Having both an LMS and CBE engine in the same platform means data is in a single location. No need to run a second set of reports from another platform.

14. **Student employment.** Having a student’s or the Portfolio can now artifacts, learning experiences, and other evidence to share with potential employers.

“[The technology is] the thing that’s hidden in the background, but it’s our foundation. We’re relying on that to be able to do the really tough work of having conversations about this new way of learning.”

Christina Amato
CBE Program Manager at Sinclair Community College
