Help students take their learning to the next level with Brightspace

We get it. Students are juggling a lot between work, family, friends, classes. That's where Brightspace can help. With an intuitive design that is available on any device, students can save time with quick access to class content, assignments, grades, and more.

Access from any device
The mobile-first design of the Brightspace platform works on every device with no compromises. Students will have full access to courses, optimized for any screen size, no matter what device they have. No more pinching and zooming.
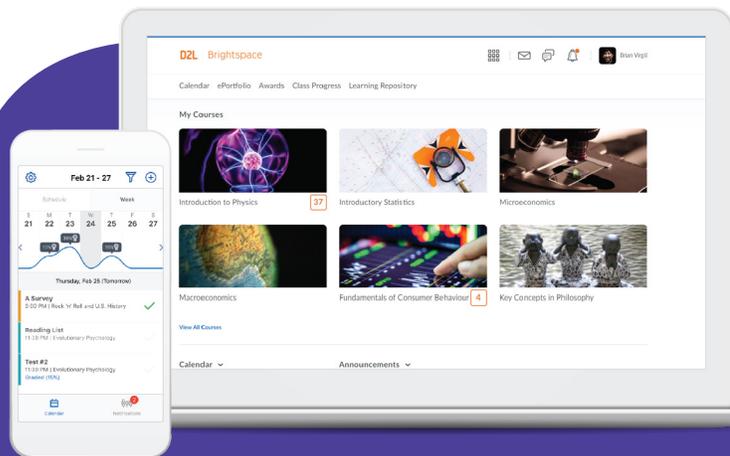

Stay up-to-date
From the course homepage, students can see a social interface with the latest announcements, reminders, assignments and more. They can add comments to each post, making it easy to ask questions. Students can use help managing their time and that's where the Brightspace Pulse app comes in. Not only can they access their courses (even offline), but they can quickly manage their time with the calendar and activity notifications.

Collaborate with others
With areas for live discussions, video assignments, and discussion forums, students can connect and learn from others in their course. No need to worry about getting everyone together in the same place for a meeting; they can connect online in a virtual classroom using video.

Be organized and productive
In addition to accessing all their course content, students can use Brightspace to complete quizzes, upload assignments, check grades and interact with their instructor. A calendar with upcoming activities, assignments and tests will keep them on track.

More Fun than a Textbook

- Video lectures are fully searchable so students can easily find information on a specific topic.

- With gamified content—including content that unlocks as a student progresses, interactive assessments, and badges as they achieve outcomes—your students can stay engaged and focused.

- Students can get feedback that is timely, specific and relevant to them—with video-based comments, annotated feedback and detailed rubrics that will let them know how they did and what they can do to improve.

- Students can practice presentations beforehand using video assignments. They can watch a recording of themselves, get feedback from others and re-record as many times as they wish.
