D2L BRIGHTSPACE

# Make Teaching Easier and Learning More Effective with D2L Brightspace

| What Moodle Delivers Today | What Brightspace Can Help Academic Teams Achieve |
|---|---|
| **Course management through continuous administrative effort**<br>Moodle enables faculty to create courses, upload content, manage assignments and conduct assessments. However, faculty still spend considerable time preparing materials, updating content, managing repetitive tasks and administering courses. | **Simplified course management with more time for teaching**<br>Brightspace combines intuitive course management, reusable content and AI-assisted capabilities through D2L Lumi to help educators create, adapt and manage learning materials more efficiently. This frees up time for teaching, mentoring and student engagement. |
| **Learner progress and activity tracking**<br>Moodle allows faculty to monitor grades, submissions, course activity and learner progress. However, having this information does not always make it easy to identify students needing attention or determine timely interventions. | **Learner insights that enable proactive student support**<br>Brightspace provides integrated learner analytics, progress tracking and engagement insights to help faculty identify struggling students and intervene earlier, enabling more proactive learner support with less manual analysis. |
| **Personalised learning requiring more faculty effort**<br>Moodle supports different learning pathways and course activities. However, delivering meaningful individual experiences across large and diverse cohorts can still demands considerable faculty attention and ongoing management. | **Easier and efficient personalised learning at scale**<br>Brightspace combines release conditions, learning pathways and learner insights to help faculty deliver targeted content, activities and support based on student progress, making personalisation easier to manage across larger cohorts. |
| **Assessment and feedback processes that are time-consuming**<br>Moodle supports quizzes, assignments, grading, rubrics and feedback. Yet creating assessments, providing timely feedback and evaluating achievement against learning outcomes can remain time-consuming. | **Streamlined assessments to focus more on meaningful feedback**<br>Brightspace combines streamlined assessment workflows, rubrics, learning-outcome tracking and AI-assisted assessment creation to reduce repetitive effort, enabling faculty to focus on meaningful feedback and improving student achievement. |
| **Faculty flexibility with varying academic quality**<br>Moodle gives faculty flexibility to design and manage courses. However, maintaining consistent course quality, accessibility and learner experiences across departments while preserving academic autonomy can become challenging as programmes grow. | **Consistent academic quality without limiting faculty flexibility**<br>Brightspace supports reusable course structures, centralised content management, accessibility tools and learning-out-come alignment, helping Deans maintain consistent academic standards while allowing faculty flexibility in how they teach. |
| **Established and familiar teaching workflows with limited innovation**<br>Faculty are familiar with Moodle and established teaching workflows. However, familiarity does not necessarily mean educators are fully benefiting from emerging capabilities such as AI-assisted teaching, learning analytics and personalised learning. | **Continuous faculty development through teaching innovation**<br>Brightspace combines evolving learning capabilities with dedicated training, implementation support and customer success resources, helping faculty adopt new teaching approaches and continuously improve their digital teaching practices. |

The best way to understand whether a different platform can offer meaningful improvements is to experience it firsthand. **Explore the interactive Brightspace course** to discover its capabilities, flexibility, enterprise reliability, support resources and approach to migration.
